Madani Systema

VANGUARD VAULT

Purpose-Built for Controlled Multi-Channel Operations

Vanguard Vault is a compact four-channel signal platform designed for simultaneous monitoring and handling of multiple communication paths. The system emphasizes clear channel organization, operational simplicity, and flexible integration for fixed or deployable environments.

- Four independent channels for simultaneous operation
- Supports UHF and VHF signal environments
- Clear channel identification for fast operator awareness
- Compact architecture for system integration
- Suitable for command, field, and test environments

TYPICAL APPLICATIONS

Command and communication rooms, field deployments, system integration, testing, and evaluation activities.

PRODUCT OVERVIEW

Vanguard Vault combines four independent channels in a simple operating structure intended for concurrent signal activity. The platform is designed to keep the workflow clear, allowing operators to identify, monitor, and manage each channel independently while maintaining a compact system footprint.

Signal Coverage

The system is configured for UHF and VHF signal coverage, providing a focused operating scope for communication and signal-management applications.

Operational Approach

- Simultaneous multi-channel operation
- Straightforward channel monitoring
- Flexible integration into existing systems
- Suitable for fixed or deployable configurations

Madani Systema

CORE CAPABILITIES

Vanguard Vault is built around practical operation and integration, with an emphasis on clarity, channel independence, and deployment flexibility.

KEY CAPABILITES

- Four-channel concurrent operation
- Independent channel handling and identification
- UHF and VHF signal support
- Compact, integration-ready architecture
- Operator-friendly workflow
- Adaptable for mission, test, and evaluation use

TECHNICAL HIGHLIGHTS

- Number of channels: 4
- Signal coverage: UHF / VHF
- Operating mode: simultaneous multi-channel
- Deployment: backpack integration
- Configuration: mission-oriented and scalable
